

Area Rugs

FLOOR CARE

Snap, crackle, pop! Area rugs look good and work great. A combination of marvelous materials, beautiful patterns, and variety in sizes is the formula. Here's how to keep your area rugs looking wonderful for years to come.

We recommend a pad placed underneath your rug. This will prevent your rug from moving which can cause premature wear.

You should turn your rug occasionally as over time traffic patterns and/or sunlight can cause uneven wear or fading on your rug.

Repairs to the fringes and edges, which tend to wear first, should be attended to promptly to stop knots from unraveling. You should clean spills immediately with the following method: blot with a clean white cloth, spot clean with a solution of clear dish-washing detergent (non-bleach) and water, rinse with water, and blot dry.

Use a professional who has experience with cleaning quality rugs. Several cleaning methods will work, but to prevent rapid resoiling, it is important to completely remove any cleaning agents.

QUICK ACTION ON SPILLS:

Natural wool fiber sheds liquid spills, so quick action offers the chance of preventing a stain. The following action will help you prevent stains from setting in.

-  Do not rub a spill as you will only cause the spill to set in deeper into the fibers. Press with absorbent white paper (such as paper towels) gently onto the stain and repeat until most of the spill is absorbed.
-  To remove any residual stain, use lukewarm water (not hot) with a small amount of carpet shampoo or mild dish-washing liquid or white vinegar.
