

# FLOODING?

## WHAT TO DO & WHO TO CALL

- Identify the Source of the Water:
  - If weather-related, evacuate safely as water levels can rise unpredictably.
  - If due to a household failure (e.g., broken pipe), turn off the water supply if possible.
- Call Your Utility Company:
  - For high floodwaters, contact the electric company to cut the power safely, avoiding the risk of electric shock.
- Pump Out the Water:
  - Use a mop for small puddles or call a water restoration company for significant flooding.
- Increase Air Circulation:
  - Open windows and doors for ventilation.
  - Use fans and dehumidifiers to speed up drying, or rely on professional equipment if available.
- Call Your Insurance Company:
  - Report the flood, document damages, and check your policy coverage.
